Abstract — Binance Smart Chain (BSC) is a parallel smart contract-enabled blockchain to Binance Chain that provides a permissionless platform for decentralized applications (DApps). My Rich Coin or abbreviated as MRC is a token made from the Binance blockchain (BEP20) which has four main development goals, namely the blockchain gaming platform, wallet for assets, virtual currency trading platform for games, and game crowdfunding.

I. INTRODUCTION

Binance Smart Chain (BSC) is a parallel smart contract-enabled blockchain to Binance Chain that provides a permissionless platform for decentralized applications (DApps). While Binance Chain offers high throughput targeting active crypto trades, it lacks in the programmability department.

My Rich Coin or abbreviated as MRC is a token made from the Binance blockchain (BEP20) which has four main development goals, namely the blockchain gaming platform, wallet for assets, virtual currency trading platform for games, and game crowdfunding.

MRC coin is built with the IBEP20 code with solidity 0.8.0 language which has a good level of security so that MRC coin holders have no doubts about investing for a long time.

MRC coins can be stored in several digital wallets such as Metamask, Trust Wallet. In the future, MRC coins can be used in MRC games by gamers to purchase MRC game products which can provide benefits for gamers and MRC coin holders.

II. PROJECT WORK

- Blockchain Gaming Platform

we're focused on creating a globalized gaming platform for blockchain digital currencies. By creating and integrating game content, we have formed a foundation for blockchain digital currencies that will help provide digital currency solutions for a variety of entertainment services. Entertaining content is the way to help blockchain technology develop at a more rapid pace, making it more popular.

- Wallet for Digital assets

A smart digital asset wallet for gamers worldwide, implementing digital asset management, future **myrichcoin.com** investment and crowdfunding for game project provide support for MRC Wallet. this is an innovation for the unknown "blue Ocean" market, a digital asset wallet for bilion of gamers the wold over.

- Virtual Currency trading platform for games

A Global digital asset trade platform for games, supporting MRC coins and providing support for further myrichcoin.com investment and crowdfunding project in the future. The digital asset trading platform can also service billion of gamers around the world, all while cooperating with a variety of trading platforms to form a kind of symbiotic relationship that benefits everyone.
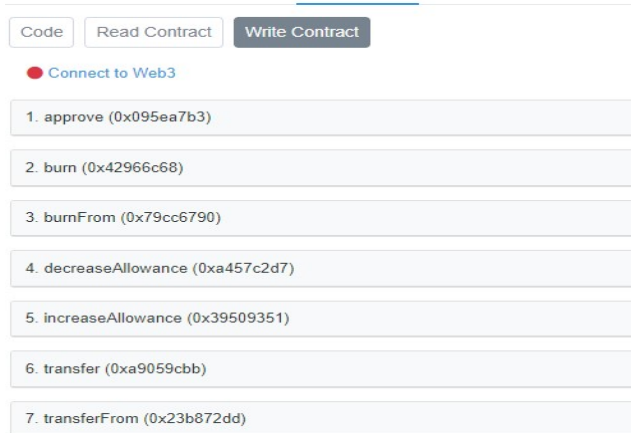

- Games Crowdfunding

by creating the primary crowdfunding and information portal for the global games industry, exclusive and top quality projects are able to nurtured by MRC-coin Fund, with an early bird phase only allowing MRC Coin Investments.

III. CODE CONTRACT

```
pragma solidity ^0.8.0;
contract mrcoin is ERC20, ERC20Burnable {
    constructor() ERC20("My Rich Coin", "MRC") {
        _mint(msg.sender, 117000000 * 10 **
decimals());
```

```
        }
}
```

Based on the source code above, it can be seen that the number of MRC coins created was only 117 million, and coins cannot be added, because the mint function in the smart contract does not exist. The following is a written contract facility. In figure 1.

| Code | Read Contract | Write Contract |

● Connect to Web3

1. approve (0x095ea7b3)

2. burn (0x42966c68)

3. burnFrom (0x79cc6790)

4. decreaseAllowance (0xa457c2d7)

5. increaseAllowance (0x39509351)

6. transfer (0xa9059cbb)

7. transferFrom (0x23b872dd)

Figure 1. Write Contract

IV. TOKEN ECONOMIES

The MRC allocation is a fair distribution of coins to fulfill future MRC projects. The following is the allocation token in table 1.

Table 1. Token Allocation

Marketing partners	4,680,000	4 %
Team	17,550,000	15 %
Initial circulating supply	18,720,000	16 %
DAO Maker sale	29,250,000	25 %
Liquidity	46.800,000	40 %
Total Supply	117,000,000	100 %

Based on table 1 above, the total allocation to meet the needs of Fully Diluted Valuation and Initial Market Cap is in table 2.

Table 1. Fully Dilluted Valuation and Initial Market Cap

Fully Dilluted Valuation	$1,200,000
Initial Market Cap	$196,000

V. ROADMAPS

To fulfill the MRC development activities so that the developer has a clear direction, a roadmap is needed in completing the MRC project. Following are the MRC coin roadmaps in table 3.

Table 3. Roadmaps

Phase	
Phase I	: Team Building
	: Blockchain Wallet Access Function Test,
	: Official Site,
	: PRE-SALE,
Phase II	: PancakeSwap Listing
	: Coingecko Listing
	: Coinmarketcap Listing
	: Marketing with twitter influencers
Phase III	: Finish Whitepaper v1.0 for Games
	: Setup Foundation and Legal Structure
Phase IV	: The Batch of Game Character
	: Main Gaming Framework Development
	: MRC Games - Infrastructure for Blockchain Developer
Phase V	: DAO - Decentralized Community Launch
	: Launch Game for MRC-Games App
	: Launch MRC-Wallet
